

Motorino Diavolo

N° 1.02

Description / purchased parts package

We offer you a selector box for old PX gear box to replace your original selector box. The MD N° 1.02 is only suitable for old PX transmissions and PX handlebars. The actuating lever is not flush with the sealing surface in the third gear.

Our sequential selector box changes the type of shifting: You add a spring tube and a torque support to your handlebars and change the selector box. The torque support is suitable for PX handlebars, for other handlebars it has to be adjusted by you.

Then you are shifting your scooter like a motorcycle: rotate stop and shift a gear higher or lower. Release, and the handle turns back into the neutral position. This allows a much faster shifting. Gear jumping is impossible because the actuating lever is locked by the MD N° 1.02.

Installation only for experienced craftsmen or retailers. We recommend new bowden cable with a Teflon core, and the turning handle must be smooth running.

If you are unsure, ask us via Email! (info@ib-ideenbau.de)

Purchased parts package:

- Selector Box for old PX gearbox
- Spring tube for PX handlebar
- torque support for PX handlebar
- Gasket
- Installation instruction
